WHERE IT GOES

This part in colour, its neighbours in grey

HOW TO MAKE IT AND HOW IT FITS

Buy a plain steel tray about 460 x 300 x 45 mm, 1.5 mm wall, with a flat floor at least 457 x 297 mm inside. No plastic coating.

Two fan intake slots in the back wall, 56 wide x 22 tall, from 20 to 42 mm up from the floor, centred 110 mm left and 50 mm right of the centre.

Drill 6 mm in each corner, cut between with a hacksaw or nibbler, file.

Six 4.5 mm holes in the floor for the foot studs, 124 mm each side of the centre line front to back, at 210 mm left, 45 mm left and 120 mm right of centre. Measure from the centre lines you scribe.

Deburr every cut edge inside and out; touch up bare steel with paint.

Fit: a rubber foot under each hole; its stud goes up into a standoff.

Check: the six holes match the base plate's corner holes when the plate is laid on top, centred, before the liner goes in.
